

## 6th Street Remodel

### Whole House Remodel with Floor Plan Modification

This house needed an entire remodel, including new windows, roof and kitchen. The floor plan was also flawed. The open floor plan was great, with the exception that the dining area was essentially in front of the fireplace. Here the contractor added a half wall to the right of the kitchen, creating a small entrance foyer and defined dining area within the open floor plan. A new light fixture further defined the dining area. A center island with seating was added to the remodeled kitchen to offer more casual seating.
