

Lakeview Addition

Historic home addition with ICF method

The addition includes a new master bedroom, bath and closets, an office, a rec room and a theater room and guest bath. It also has a wrap around porch that connects to the original second story deck.

The project was built to blend with the original house including all interior doors and trim and exterior window trim rafters and siding.

The project uses the insulated core foam method, with four wall construction to make it better suited to withstand storms and offer a safe room. .
